

WHICH DRI MARK COUNTERFEIT MONEY DETECTOR IS RIGHT FOR MY BUSINESS?

Counterfeit Detector Pen DRI-351B1

Simple to use. Make a small mark on US currency. A clear/amber mark indicates genuine US currency paper. A dark mark means the bill is probably counterfeit. Since currency paper stock is not available to the public, Dri Mark's special ink authenticates the paper's stock by color.

Dual Detector Pen DRI-351UVB

The Dual Detector combines the classic Counterfeit Detector Pen with a powerful UV light cap for an extra measure of protection against bleached bills.

Flash Test DRI-351FT

Dri Mark's Flash Test gives results in less than a second on the ink sensor, enabling your frontline staff to make a quick, discreet decision in accepting currency. Further testing of a suspicious bill is available right on the same device with the watermark detector and the UV security stripe detector. A QR code is included on the front of the device, linking to a training video for easy set up.

Tri Test DRI-351TRI

Three simple tests to authenticate US money take just seconds, and provide the highest degree of protection against counterfeit including bleached bills. UV light reveals the security thread, back-light reveals watermark portrait, and the classic Counterfeit Detector Pen authenticates genuine US currency paper.

UV Pro DRI-UVPROPLUSB

Professional quality compact ultraviolet flashlight for authentication of documents and detection of counterfeit currency. The UV Pro detects UV features on drivers licenses, passports, credit cards, travelers checks and most paper currencies.
